

My Experience with Secure 2K25 by Savory Minds

by Nese Narasimha

Hi, my name is Nese Narasimha. I'm from the Computer Science and Engineering branch, studying at JNTUA College of Engineering, Anantapur. I'm really proud to be a part of the Secure 2K25 initiative by Savory Minds.

Secure 2K25 is something truly different. Its not a typical college course or just a coaching center. It was started by Amit Sir, Chairman of Savory Minds, with a strong purpose to help students like us get real-world, hands-on knowledge in cybersecurity and emerging technologies. Its created by a company, not a college, and its all about bridging the gap between theory and industry-level skills.

Before I joined this program, I was searching for good training. I checked various coaching centers, online platforms, and even heard a lot about places like Ameerpet. But most of them had the same problems no proper placements, mixed batches, poor teaching quality, and high fees with little actual learning. I was not confident about getting the right direction from those places.

Secure 2K25 changed everything for me. The training here is nothing like what Ive seen before. The content is advanced and practical, and everything is taught in a way that makes sense, even if youre starting from scratch. Amit Sirs teaching is research-based, and he focuses on each and every student personally. That personal attention is something even AI tools like ChatGPT or DeepSeek can't replace.

In this program, Ive learned so many domains from SOC Analyst, Penetration Testing, and Bug Bounty, to Cyber Automation, Blockchain, and even AI, Machine Learning, and Generative AI. Its all hands-on, and every session gives us real experience that prepares us for the industry.

One of the best things is how much my skills have improved. My technical knowledge is stronger, my communication is better, and I feel much more confident when it comes to interviews or working in real-time situations.

What I also love is that Secure 2K25 is open to everyone. There are no language or background barriers. No matter what stream or college you're from, you can learn everything from zero. The entire course is designed to support students from all levels, with full clarity and guidance.

And the value is amazing. Anywhere else, learning this much would cost lakhs of rupees. But here, Savory Minds offers it at a very affordable price and they even provide EMI options. This isn't about profit; it's a genuine mission to help students build real careers.

We also had the chance to go on an amazing trip to Wonderla, organized by Savory Minds. It wasn't just fun; it was a bonding experience with our batchmates and a great memory that shows how much they care about our overall growth, not just academics.

Before joining, I was unsure and a little lost. But now, I feel confident, clear about my future, and proud of the engineer I'm becoming. Secure 2K25 has given me not just skills, but a true transformation in how I think about my career and life.

Amit Sir started this mission after visiting colleges and seeing how students were struggling with low-quality education. His goal was to change the system and bring real, practical, and useful learning to students like us, and that's exactly what Secure 2K25 is doing.

From my heart, I highly recommend Secure 2K25 to every student who wants a serious, successful career in cybersecurity or tech. I'm truly proud to be a part of this journey. Thank you, Amit Sir, and

thank you to the entire Savory Minds team for giving me this incredible opportunity.
