

My Secure2K25 Experience

Hello everyone, my name is HARSHITHA. I'm currently studying B.Tech CSE at Central University of Karnataka.

I'm really excited to share my experience with the Secure2K25 — a program that truly changed my life both technically and personally.

First of all, I want to thank AMITH SIR and the entire Savory Minds team for creating such a life-changing platform.

This initiative is for everyone. No matter where you are from, your background, your college, your language. EVERYTHING IS TAUGHT FROM ZERO LEVEL, STEP BY STEP WITH FULL CLARITY.

After visiting so many colleges and seeing how lost students were, Amith Sir started Secure2K25 to bring real-world knowledge into education. This is not just a course, it's a mission to change how we learn.

Secure2K25 is a true turning point in my life. It gave me clarity, confidence, and a strong direction in my career journey. This initiative helped me grow from a confused student to a confident learner.

Before joining Secure2K25 I had very limited technical and communication skills. But now, I've improved a lot in both areas – and I can clearly see my own transformation.

I used to be scared of the tough competition in the CSE field and worried about whether I'd get a job or not? And whether I'll look after my family or not? For learning cybersecurity and multiple domains I searched many coaching centres but the truth is there is no proper placements and mixed batches (final year students with freshers). High fees but no real learning.

But after joining Secure2K25 that fear is completely gone. I feel confident and ready for the future.

Even students from IITs and NITs may not get this level of hands-on, practical training. That's how deeply and effectively this program teaches every concept.

The teaching style is exactly what students love – simple, clear, and engaging. Amith Sir explains every concept in a way that is easy to understand and remember.

The quality of the content is truly 10x better than what we find elsewhere. It's practical, real-world based, and directly useful for job preparation.

Every single day, we are given a task to apply what we've learned. These daily tasks keep us consistent, active, and help in building confidence.

Some questions are so advanced that even ChatGPT and Google can't answer them properly! That's the level of depth we're dealing with here – it's beyond standard learning.

This program covers multiple domains in tech at a very affordable cost. Outside, to learn all these domains, we might have to spend up to 4 lakhs or more.

I'm learning so many cutting-edge areas like

1. SOC Analyst
2. Penetration Testing
3. Bug Bounty
4. Cyber Automation
5. AI and Generative AI

It's a flexible and student-friendly platform. Recently, all students were even taken on a trip. This shows how much they care about our overall development and happiness.

I truly recommend Secure2K25 to any student who wants to build a meaningful future.

Anywhere else this kind of program would cost lakhs. But at Savory Minds it's very affordable and most importantly EMI options are available too.

I feel extremely proud and lucky to be a part of Secure2K25. It's not just a training program –

it's a life-changing opportunity.

A heartfelt thank you to Amith Sir and the entire team of Savory Minds for providing such a wonderful and life-shaping platform for students like me.
