

My Review of Secure 2K25 - By Rumeena, CSE, SREC (Batch 2026)

Introduction

Hi, I'm Rumeena, a Computer Science Engineering student from SREC, batch of 2026. I'm proud to be a part of SECURE 2K25 by Savory Minds - an opportunity that changed my journey.

What is Secure 2K25?

Secure 2K25 is more than just a training program - it's a vision to build real engineers. It was started by Amit Sir, Chairman of Savory Minds, not by a college, but by a company that understands what the industry really needs. This initiative focuses on hands-on learning, real domain experience, and bridging the gap between students and the cyber security industry.

It's a path designed for students like me - sincere, curious, and searching for the right guidance.

Before Joining -

My Situation

Before joining, I was confused. The market was filled with multiple domains, and I didn't know what was right for my growth. I explored different platforms, including online sites.

Places like Ameerpet seemed crowded and unclear. I heard from others that many institutes:

- Mix batches with different year students
- Offer no proper placements
- Teach outdated or shallow content
- Charge high fees with no real output

It felt like more of a gamble than a guide.

Why Secure 2K25 is Different

This is where Secure 2K25 changed everything. Unlike others, this content is research-based, advanced, and hands-on. We're not just listening - we're actually doing things.

Learning multiple domains at once with this level of clarity and depth is something I've never experienced before.

The environment, teaching style, and practical approach set it apart from both typical colleges and coaching centers.

Domains I'm Learning Through Secure 2K25

I'm exploring powerful domains like:

- SOC Analyst
- Penetration Testing
- Bug Bounty
- Cyber Automation (Manual + Intelligent)
- Blockchain
- Artificial Intelligence, Machine Learning & Generative AI

This kind of exposure - all in one place - is rare and incredibly valuable.

Skill Growth & Confidence

Before, I only had surface-level knowledge. Now, I've built strong technical skills and practical understanding in multiple areas of cyber security.

My communication and interview skills have also improved. I express myself better and feel confident in technical discussions.

The biggest change? I now believe in my ability to succeed in this field - no doubts, no fear.

Even tools like ChatGPT or DeepSeek can't replace the human guidance and mentorship I receive here from Amit Sir.

Inclusivity

There are no language or background barriers in this program. Everything is taught from scratch - whether you're from a different stream, college, or language medium.

Everyone is welcomed, guided, and supported - equally.

Affordability & Value

What I'm learning here would easily cost lakhs elsewhere - and still, many wouldn't teach like this.

Secure 2K25 offers it all at an affordable price, with EMI options available.

"Unlike others, this program isn't run as a business - it's created with heart, for students."

Why It's Worth It

Joining this program was one of the best decisions I've ever made. I invested in something that's building my career, skills, and confidence. Rather than spending money on temporary things, I chose to invest in myself - and it's paying off.

My Transformation

Before joining, I felt lost and unsure of my career direction. Now, I have clarity. I know where I'm heading, and more importantly - I believe I can get there.

Secure 2K25 made me feel like an actual engineer - someone with purpose, skills, and confidence.

Why It Was Started

Amit Sir created this initiative after seeing how students were struggling in colleges - talented, but without proper guidance or exposure.

His mission was to provide real domain knowledge, affordable quality education, and hands-on learning - especially for students from middle-class and lower-middle-class backgrounds.

This isn't just training. It's an educational movement.

Final Thoughts

I feel proud to be a part of Secure 2K25. It's helped me grow not just technically, but as a person - with belief, clarity, and courage.

"From the bottom of my heart, I thank Amit Sir and Savory Minds for creating this space for students like me. This isn't just a course - it's a turning point in my life."
