

Hi everyone I'm Shaleam Raju graduated from RGM college Nandyal, I want to share that i got the scholarship and the scholarship name is secure 2k25 and this is organized by B.Y Amit Kumar sir founder of savory minds. First of how i want to share that how i got the opportunity. when iam in final year my college management department of cyber security they bring the workshop on cybersecurity which is held 3 days and remaining 7 days were online mode i just listened the one class and i got more attracted to the teaching of classes that are in depth . This scholarship is big initiative that who ever didn't done this type of initiative i have never seen ever before. This is the life changing moment where they will promise that give the content 10 times better and which is not found in internet and chatgpt etc. As they promised they are providing the content 10 times more and they in this scholarship what we are going to learning is

1. communication skills
2. certified cyber analyst
- 3.soc analyst
- 4.pentesting
- 5.bug bounty hunting
- 6.mern stack development
- 7.fullstack development
- 8.A.I machine learning Gen Ai

so when compare to the college teaching and other coaching centers there is the only platform will be changed and somehow in teaching but not in content and content delivering but in savory minds the teaching will unique and the content will be 10times more and every content is research based content. They tech the content is like every thing they have done the research and it 100% sure and original and its the reality. So when started learning cca started networking even though i have know the networking i learned new thing day by day and gaining my skills strong. I taken right decision to change my life and it's most great honour to achieve the scholarship. Thanks to amit sir for giving this opportunity and to savory minds
