

Course Review: SECURE 2K25 by Savory Minds

I am Vedi Sai Rishi Kumar, a 3rd-year student in the CSE (Computer Science and Engineering) branch from JNTU Anantapur. I am extremely grateful to be part of the Secure 2K25 initiative by Savory Minds. This review is a summary of my experience and transformation through the program, crafted with utmost sincerity.

Secure 2K25 is an advanced cybersecurity education initiative founded by Amit Sir, Chairman of Savory Minds. This mission-driven platform was built not by a college, but by a dedicated organization to bridge the gap between conventional education and the real-world industry. It emphasizes hands-on training and genuine domain exposure.

Before joining Secure 2K25, I was exploring multiple coaching centers and platforms. I came across institutions like those in Ameerpet but was disappointed by issues like mixed batches, high fees, substandard teaching, and negligible placement support. The Secure 2K25 program stood out immediately in comparison.

What differentiates Secure 2K25 is its deep focus on hands-on learning, domain-specific expertise, and its student-first approach. The quality of teaching-especially by Amit Sir-ensures that even complex topics are simplified with real-world applications. The program is structured far better than most B.Tech curricula, giving practical knowledge in a shorter duration.

Throughout this journey, I am being trained in various cutting-edge domains including:

- SOC Analyst

- Penetration Testing
- Bug Bounty
- Cyber Automation (Manual & Intelligent)
- Blockchain
- AI, Machine Learning, and Generative AI

Note: I am currently pursuing the full set of modules mentioned above. The course is expected to be completed within one year. This learning experience is helping shape my technical foundation and will definitely support my job opportunities in the future.

The impact of the course has been incredible. My communication and technical skills have significantly improved. I am far more confident, not just in interviews but in problem-solving as well. Amit Sir gives attention to every student personally, and no AI tool can replicate his mentorship.

One of the best parts of Secure 2K25 is that there are no language or background restrictions. Anyone-from any stream or college-can start from zero and grow rapidly with this program. The content is taught clearly, step by step, ensuring nobody is left behind.

In terms of affordability, this course is a blessing. What costs lakhs elsewhere is offered here at a minimal price with EMI options. It's a non-profit initiative focused purely on student empowerment.

Investing in Secure 2K25 was one of the best decisions of my life. Unlike money spent on temporary luxuries, this investment in learning will pay lifelong returns. I entered confused, lacking clarity about my future. Today, I feel like a real engineer with a defined career path

and purpose.

This initiative was born from Amit Sir's concern after seeing students struggle in traditional colleges. He envisioned a revolution-and Secure 2K25 is that vision in action. It's not just education; it's transformation.

I feel proud to be a part of Secure 2K25 and deeply thank Amit Sir and the Savory Minds team for this invaluable opportunity.
